Helen Hasan

Applications of Social Information Systems for living well, longer

Date and Location

Wednesday, 25th February
Training Room, AHSRI,
12:30 - 1:30pm
Light refreshments will be provided

These days most of us rely on Information Systems / Apps on digital devices for almost everything we do. In particular, we keep in touch, entertain and gather information wherever we are. Despite this, there are still many people in society, who are isolated from the benefits of the virtual world, particularly the elderly. This seminar will describe three research projects in this area involving (1) building the Dementia Illawarra website, (2) designing Dementia Friendly (online) Communities and (3) overcoming social isolation among the elderly with the Internet and social media.

Dr Helen Hasan is Associate Professor of Information Systems (IS) and currently a member of AHSRI at UOW. She has published extensively in IS and related areas of Human Computer Interaction and Knowledge Management using frameworks based on Complex and Activity Theories.

RSVP - for catering purposes
