Jenny McNamee

Length of stay and cost impact of hospital acquired diagnoses: Multiplicative model for an inpatient data set

Date and Location

Wednesday, 29th April
Training Room, AHSRI,
12:30 - 1:30pm
Light refreshments will be provided

This seminar will examine the additional length of stay (LOS) and cost that may be attributable to issues of care quality, by investigating and assessing the incidence and impact of hospital acquired diagnoses in overnight inpatient episodes of care in one local health district.

Jenny McNamee is the director of the NCCC at the University of Wollongong. She has previously worked in the areas of health system performance management, casemix clinical costing and episode based funding in the NSW public health sector. Jenny worked closely with Children’s Hospital’s Australasia in the establishment of a national performance and casemix benchmarking program and was involved in a number of paediatric casemix development activities.
