ePPOC: Using evidence to improve outcomes for people experiencing chronic pain

Date and Location
Wednesday, 18th November
Training Room, AHSRI,
12:30 - 1:30pm
Light refreshments will be provided

The electronic Persistent Pain Outcome Collaboration (ePOCC) is an Australasian initiative which involves adult and paediatric specialist pain management services collecting a standard set of information about their patients and outcomes. This information is analysed, reported and will be used to create benchmarks for the sector, with the aim of improving outcomes and services for people experiencing persistent pain. This presentation will describe the implementation of the program, present an analysis of the data received and discuss future directions for ePPOC.

Hilarie joined AHSRI in 2013 where her primary role is the management and implementation of ePPOC. Prior to joining the Institute, Hilarie worked in a variety of not-for-profit and government roles with an emphasis on measuring outcomes in the mental health sector. More recently she managed research projects using linked data in the WA Data Linkage Unit and the NSW Centre for Health Record Linkage. Hilarie has academic qualifications in psychology, biochemistry and psychophysiology.
