Ongoing Needs Identification in the Mid North Coast Coordinated Care Trial: How and Why
How to use this manual

Welcome to this primer on the hows and whys of ongoing needs identification and screening in the Mid North Coast Coordinated Care Trial.

If, before you start, you want to get some background information on the approach and why it’s important for the trial  Page 1

If you already know the background and just want to know how to complete the Ongoing Needs Identification (ONI) tool, go straight to  Page 12

If you want to know how to use the Living Arrangements profile  Page 22

If you want to know how to use the Carer profile  Page 24

If you want to know how to use the Health Conditions profiles  Page 26

If you want to know how to use the Psychosocial profile  Page 31

If you want to know how to use the Functional Profile  Page 34

If you want to know how to use the Health Behaviours profile  Page 38

If you want to know how to use the Environmental profile  Page 41

If you want to know how to use the tools to investigate need and to develop a care plan  Page 42

If you want the answers to some commonly asked questions, go to  Page 44

If you want some useful references, go to  Page 48

If you want copies of the ONI tools  Page 52

1 Introduction and background

This document provides guidelines on how to use the screening and assessment tools that are being used in the Mid North Coast Coordinated Care Trial. These tools draw heavily on those initially developed for use in Primary Care Partnerships on Victoria\(^1\) and then subsequently modified for South Australia\(^2\). They have been modified and further developed for use in the Mid North Coast Coordinated Care Trial.

These guidelines discuss how to complete the Ongoing Needs Identification (ONI) tools, how to undertake an Ongoing Needs Identification that may prompt referral and/or further assessment and how to complete a Summary and Action Plan. Issues relating to assessment (specialist and comprehensive) and care planning are not included.

The guidelines are divided into 15 sections:

1. Introduction and background
2. Overview of the ongoing needs identification tools and how to use them
3. How to complete the contact details
4. How to complete the service entry data set
5. How to complete the ONI summary and action plan
6. How to complete the supplementary living arrangements profile
7. How to complete the supplementary carer profile
8. How to complete the supplementary health conditions profile
9. How to complete the supplementary psychosocial profile
10. How to complete the supplementary functional profile
11. How to complete the supplementary health behaviours profile
12. How to complete the supplementary environmental profile
13. How to use the tools to investigate need and to develop a consumer care plan
14. Frequently asked questions
15. Selected bibliography for screening in primary care

\(^1\) Details of the Victorian model can be found at: http://hnb.dhs.vic.gov.au/acmh/phkb.nsf
\(^2\) Details of the South Australian model can be found at www.eraproject.sa.gov.au
**Why the trial is collecting information**

There are 5 different reasons to collect standard information in the trial and they fall under 3 headings:

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Frequency</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>TO MANAGE THE TRIAL</strong></td>
<td></td>
</tr>
<tr>
<td>To assist the trial to plan, manage its budget and cash flow and to profile the trial participants.</td>
<td>Collect once (progressively over the 1st 3-6 months of the trial for most people rather than at a formal interview).</td>
</tr>
<tr>
<td>Allocate consumers to either the ‘complex need group’ or the ‘population need’ group.</td>
<td>Collect once (progressively over the 1st 3-6 months of the trial for most people rather than at a formal interview).</td>
</tr>
<tr>
<td><strong>TO PLAN CARE FOR PEOPLE IN THE TRIAL</strong></td>
<td></td>
</tr>
<tr>
<td>Plan care for the individuals in the complex need group.</td>
<td>Collect as needs change throughout the course of the trial.</td>
</tr>
<tr>
<td>The information will be helpful in referring a consumer to another agency for service</td>
<td>If information does not already exist, collect when making referral</td>
</tr>
<tr>
<td><strong>TO EVALUATE THE TRIAL</strong></td>
<td></td>
</tr>
<tr>
<td>To evaluate the trial.</td>
<td>Collect at least twice (in the 1st 3-6 months and in the last 6 months of the trial).</td>
</tr>
</tbody>
</table>

**The purposes of assessment**

1. The core purpose of assessment is to identify the person’s needs and to use this as the basis of setting care goals and developing a care plan tailored to individual need.
2. As a by-product, it will provide the trial with a tool for managing its available community care funds.
3. As a further by-product, it will allow the trial to measure consumer outcomes over time.

**Criteria for entry into the trial**

Figure 1 shows the overall process that has been developed through a series of workshops in the planning phase of the trial.

The whole of the local Aboriginal or Torres Strait Islander (ATSI) population will be in the trial. The ‘eligibility screen’ is to identify this target population. Local service providers will conduct this ‘eligibility screen’ by identifying those people who meet the following criteria:

1. The person is an Aboriginal or Torres Strait Islander or is a family member of a person who is ATSI.
2. The person lives in the trial catchment area.

To be eligible for the Complex Need Group of the trial, there are two extra eligibility criteria:

3. The person already has a participating GP or can be successfully encouraged/helped to find a participating GP.
4. The person has an existing Medicare Number or can be successfully helped to get a Medicare Number.

Having identified that the person meets these 1st two criteria, local service providers will need to identify who meets the criteria for the Complex Need Group.
At this stage, it is estimated that 5000+ people in the target group will be classified as having ‘population needs’. People in this group require access to general health services and population-level interventions but not more intensive coordinated care. However, the trial proposes to introduce early health assessment for people aged over 30 years in this group. For logistical reasons, this ‘population needs’ group will not be invited to give informed consent to be in the trial.

About 1500-2000 people are expected to be identified during the course of the 3 year trial as having complex need needs. ‘Complex care’ is required for people with multiple and interacting conditions and needs.

**The criteria for the ‘complex need group’**

Either the person:

1) Already has a participating GP or can be successfully encouraged/helped to find a participating GP AND
2) Has an existing Medicare Number or can be successfully helped to get a Medicare Number AND
3) Has one or more health conditions (acute or chronic) AND
4) Has either Functional or Psychosocial problems AND
5) Cannot self-manage their health-related conditions AND
6) Will potentially benefit from having their care coordinated.

OR

The person is a resident carer of a person who meets all of the above criteria.

This ‘complex need’ group will be invited to give informed consent to be in the trial.

Having signed-up to be in the trial, they will move through the steps shown in Figure 1. If a person does not give consent, they will be allocated to the population needs group.

**The assessment process being used in the trial**

Workshops with local service providers during the planning of the trial identified three broad areas that require assessment:

- **Individual needs** such as medical conditions, lifestyle and functional ability;
- The individual’s **social and cultural context**, including their access to social support, family functioning and carer availability; and
- The individual’s **interaction** with the health and community care systems, particularly the level of trust they have in the system and their level of compliance with treatment.

These areas were selected at the workshops as being those that are most influential in determining an individual’s need for community care and those that best predict both their costs and their outcomes.

The trial’s assessment tools, developed through the workshops, incorporate these dimensions. A further requirement of the assessment tools is that they incorporate all necessary EPC Health Assessment requirements.
**Figure 1**  Mid North Coast CCT Assessment protocol

- **Eligibility Screen Based on Trial Selection Criteria**
  - Definitely meets criteria for Complex Need Group
    - Sign-up
    - Assign to Complex Need Group
    - Care Officer (CO) & GP Complete 1st ONI (all profiles) ASAP
    - Develop Initial Action Plan
    - Do any additional assessments
    - Care Coordinator assigns 'need level'
    - Set Care Goals and develop 1st Care Plan
    - Implement
    - Update ICI and ONI as needs change during trial
    - Review Care Goals and develop new Care Plan/s as needs change
    - Reclassify to Population Health Group if Goals achieved

- Possibly complex - still in assessment phase
  - Complete ONI (all profiles) within 6/12
  - Assign to either Complex Need Group or Population Health Group based on ONI information
  - Care Coordinator assigns 'need level'
  - Develop Initial Action Plan
  - Do any additional assessments

- Does not meet criteria for Complex Need Group
  - Assign to Population Health Group

- Age<30 years
  - Complete ICI, Core ONI, Health Conditions and Health Behaviours Profiles within 1 year
  - Develop Initial Action Plan
  - Reassign to Complex Need if needs change at any point during trial

- Age>29 years
  - Complete ICI, ONI (all profiles) within 1 year
  - Develop Initial Action Plan
  - Reassign to Complex Need if needs change at any point during trial
**Allocation to the Complex Need Group**

As already noted, there are 7 criteria that determine whether a person is eligible for allocation to the Complex Need Group:

1. Already has a participating GP or can be successfully encouraged/helped to find a participating GP AND
2. Has an existing Medicare Number or can be successfully helped to get a Medicare Number AND
3. Has one or more health conditions (acute or chronic) AND
4. Has either Functional or Psychosocial problems AND
5. Cannot self-manage their health-related conditions AND
6. Will potentially benefit from having their care coordinated.

**OR**

7. The person is a resident carer of a person who meets all of the above criteria.

Individuals who meet the eligibility criteria for the trial (ie, the person is ATSI or is a member of an ATSI family and lives in the trial catchment area) will initially fall into one of three groups:

- The person will definitely meet the criteria for Complex Need Group. In this case, they will be invited to sign-up to join the Complex Need Group.
- The person will not meet criteria for Complex Need Group. In this case, they will be assigned to the Population Health Group.
- The person will have health conditions or be at risk and might meet the criteria for the Complex care Group, but further assessment will be required before this can be determined. In this case, they will be screened using the ONI tool. The outcome of that will then determine whether they will be invited to join the Complex care Group or assigned to the Population Health Group.

**Structure of the assessment instrument**

The trial’s core assessment instrument consists of:
- Initial Contact Information (ICI) collected on 2 pages and
- Ongoing Needs Identification (ONI) Summary & Action Plan (2 pages)

In addition, the ONI has 7 ‘Profiles’. These are:
- Living Arrangements Profile
- Carer Profile
- Profile of Health Conditions
- Psychosocial Profile
- Functional Profile
- Profile of Health Behaviours
- Environmental Profile
As shown in Table 1, all profiles are required except for trial participants who are under 30 years old and are in the Population Health Group. However, not all questions in a profile will be relevant for every person. In these cases, simply follow the instructions at the top of the page.

**Table 1  Information required for different groups in the trial**

**The assessment timetable**

While the information being collected is mostly the same, there are differences in the frequency of collection. Table 2 below summarises when the required information for each group in the trial is required. These should be regarded as the minimum requirements.

**Table 2  Summary of when the information is required**

<table>
<thead>
<tr>

<td>Update as needs change or once a year, whichever comes first</td>
</tr>
<tr>
<td>At end of trial</td>
<td>Complete final ONI within 6 months of trial end</td>
<td>Not applicable. New consumers will not be assigned to the Complex Need Group in the last months of the trial</td>
<td>Update only if needs change</td>
<td>Complete final ONI within 6 months of trial end</td>
</tr>
</tbody>
</table>
Assessment will not be a one-off or annual event. Instead, assessment will occur on an ongoing basis throughout the trial. The tool has been designed to allow information to be updated as the needs of the person changes.

The ONI allows service professionals to decide whether a more detailed or comprehensive assessment is required, thereby conserving and better targeting resources. It facilitates appropriate referral to other service providers and helps in the identification of consumers with urgent needs. The ONI may result in the consumer being referred for a more in depth assessment (if required). But it can also result in the development of an action plan without the need for assessment.

This model makes a distinction between the depth and scope of different activities, and it is the depth that defines the difference between screening and assessment. The ideas are summarised in Table 3.

2 Overview of the Ongoing Needs Identification tools and how to use them

These guidelines are written on the assumption that the ONI is being completed (at least initially) on paper forms rather than electronically. However, the information is equally relevant to an electronic environment.

The Ongoing Needs Identification tools contain items that are designed to collect demographic and social details about individual consumers, plus there are items in the supplementary profiles to allow further information to be collected on those areas relevant to the consumers’ circumstances and presenting problems. Not all items will be relevant for every consumer and, in some cases, the information will not be required. In these cases, simply follow the instructions at the top of the form.

It is likely that many of the items on the Contact Details sheet will be collected during the initial contact with the consumer or the person referring the consumer. Some items, however, may not be collected until the first time a consumer is seen by a clinician. In some cases, the information may not be collected until much later in the process. Remember that the tools are designed for ongoing use and not for a one-off event.

The tools are designed so that the first 4 pages cover the core information that should be collected on all trial participants and a summary of the action to be taken. The remaining seven profiles are to cover domains that can be investigated at the discretion of the contact worker and depending on the nature of the consumer’s problem.

The first two sections (called ICI pages 1 to 2 and ONI pages 1 to 2 on the paper version) cover:

- contact details (of the consumer, other agents or agencies and their GP);
- a trial data set with codes for categories to cover demographic details, benefits and entitlements, and trial eligibility criteria;
- a summary and initial action plan – to be completed at the end and with prompts for investigating other domains using the relevant supplementary profiles.

The set of additional domains covered by the supplementary profiles have been chosen by combining evidence from the literature review, a review of the range of tools currently in use, consultations with the field on different draft versions of data collection tools, and the analysis of data from field tests. They can be used to further investigate the scope of the consumer’s needs at the initial contact point. The domains and their associated profiles cover living arrangements, carer profile, health conditions, psychosocial profile, functional profile, health behaviours and environmental profile.

The ONI Summary and Action Plan brings together all the different information that is useful for planning care for those consumers that require more complex interventions. It covers a description of the consumer’s problems/issues, and a list of current services used in the last three months. The second page contains a series of prompts for the collation or collection of evidence of consumer need(s), an initial action plan and a box for comments on risk or urgency.

---

Each page has the same space for an identifier at the top to allow the information to be shared and the bottom of each page has a space for identifying the person and agency completing the form. Signing and dating every form is an accreditation requirement by most standards agencies. There is also a box for identifying if the information has been updated. This allows the superseded information to be kept as a historical record in the file.

The design of the tools assumes that they can be used for any consumer. However, for children and adolescents most of the supplementary information will not be relevant. A separate tool for this group is not included because it is assumed they will be referred directly for an assessment to an experienced agency or professional.

The content of the different tools is summarised below:

<table>
<thead>
<tr>
<th>TOOL</th>
<th>CONTENT</th>
<th>Pages</th>
</tr>
</thead>
<tbody>
<tr>
<td>CONTACT DETAILS</td>
<td>Demographic and social details of the consumer, contact person/s, GP details and comment box.</td>
<td>ICI p.1 of 2</td>
</tr>
<tr>
<td>TRIAL ENTRY DATA SET</td>
<td>Codes to record source of referral, other demographic information and benefits, entitlements and insurance status, trial eligibility criteria, tick box to confirm consumer consent.</td>
<td>ICI p.2 of 2</td>
</tr>
<tr>
<td>ONI SUMMARY AND ACTION PLAN, p 1</td>
<td>Summary of presenting problems and consumer permission to proceed, current services used in last three months.</td>
<td>ONI p.1 of 2</td>

</table>
The **ONI Summary and Action Plan** (the third and fourth pages of the core information tool) are informed by any relevant detail from the supplementary profiles. As a result this page will usually be completed at the end and is used as a basis for putting together the action plan.

The use of the supplementary profiles depends on the particular consumer’s presenting problems or the areas usually investigated by a particular agency or clinician, or as a result of any issues arising during the initial contact. The supplementary tools are completed after the core information has been collected. The core information is recorded on the **Contact Details, Service Entry Data Set, ONI Summary and Action Plan**. The assumption is that the next steps of referral and/or care planning are a continuation of that process, and that the core consumer information will be available to share if the consumer consents to this.

There are **7 Profiles**. Complete only those profiles that are relevant for the consumer but remember that different profiles are required for different groups (see Table 1).

The tools are not a structured interview. Do not ask consumers about issues in the order that they are listed if they are inappropriate in the context. Rather, use the tools to guide a conversation with the consumer. The tools are designed to be completed based on all sources of information available to the person completing them (observation, answers to questions, information contained in a referral letter, client notes or information provided to you by a carer or referring agency). They are also designed so that different providers can add to the profiles over time.

There are instructions on each page about how to note any issues that you have not canvassed or that are inappropriate for the consumer. Most accreditation agencies have standards that do not allow for items on a form to be left blank. Accordingly, the general instruction is to record 99 or NA, depending on the case. The design of the set of tools assumes that children and adolescents will be directly referred for a relevant assessment to be completed and so it is expected that supplementary profiles will only rarely be completed with children and adolescents.

The profiles are not designed as a diagnostic tool, nor are they considered to be an assessment (while they are wide in scope, they are shallow in depth). They are tools to help determine the consumer’s risks, eligibility, priority for service and health promotion opportunities. The profiles standardise the way this information is collected as early in the consumer’s contact with the service system as possible.

As you complete the profiles, consider whether the consumer requires particular types of assessments and/or urgent services that cannot wait for a formal assessment process to be complete. Consumers should be informed about the range of service options that are available to meet their needs. This is not limited to the services provided by your own agency. Consider the wider range of services supports and resources such as for-profit services, information services, financial entitlements or other alternative services.

Pages 1 and 2 of the ONI (**Summary and Action Plan**) may be used in a duplicate fashion to cover multiple problems with differing levels of confidentiality requirements. It can be used this way if the information is sensitive and not to be shared, in which case the interviewer can complete a separate copy of the ONI for each issue. For example there may be 2 issues – seeing the podiatrist and getting referred to a sexual assault service – and it would be inappropriate to share all information for both referrals.

The Alert Box on ONI page 2 of 2 has space for comments that can be used for recording information on risk and urgency, and for prompting the use of your current procedures for notification of **Alerts** if appropriate. An alert sheet (with guidelines) is separately available from the Centre for Health Service Development at the University of Wollongong for agencies without an existing system.

Think about risk and urgency of consumer issues under four main headings:
1. Situations in which the consumer is at risk for any reason.

2. Situations in which the consumer presents a physical or emotional risk to other people, including family, friends and neighbours. This excludes risks to health professionals, which should be separately identified.

3. Situations in which the consumer represents a risk to a health professional, either intentional or unintentional and whether or not this is the consequence of the consumer's presenting problems.

4. Situations in which there is an occupational health risk to a health professional for any other reason.

For the Record - Information Updated

Each page on the paper version of the ONI has a box on the bottom to record if new information has been added. If new issues or problems are identified after a page has been completed, the new issues should be recorded on a new page. The new page is used to record any changes or additions, not to repeat issues recorded on the previous ONI. Indicate on the existing ONI that the information on the page has now been updated. This will indicate to other health professionals that a new page has been created. Do not change the original record as the original record forms part of the client history and should be stored on the client record.

A point of clarification – INI and ONI

The Mid North Coast CCT Ongoing Needs Identification (ONI) tool draws heavily on a suite of tools initially developed for use in Victoria. The Victorian tools are called Primary Care Partnerships Initial Needs Identification (INI) tools. The term ‘INI’ caused some confusion because it was interpreted as implying that all of the information would need to be collected at the point of referral or first contact. This was never meant to be the case. The ONI begins at referral or first contact, but does not end there.

The contact information collected at referral or first contact is still called the Initial Contact Information (ICI). Likewise, ‘Initial Action Plan’ has been retained. In both cases, this is because it is expected that both will be completed early in the process. After Initial Contact Information has been collected and an Initial Action Plan has been developed, consumers with ongoing care needs will move into an assessment phase and subsequently have a ‘Care Plan’.

Identifying a person’s needs, and their opportunities for health promotion, is an ongoing process that begins at referral. But needs and opportunities change over time (hence the ‘information updated’ section discussed above) and will be identified at different times.

The ONI is a live process that involves all of the contacts a person has with the service system and that continues beyond initial contact.

It makes sense to capture as much information as possible as early as possible. And, with the consumer’s consent, it makes sense to share that information between all of the providers involved in the person’s care. Consumers do not want to tell their story multiple times and providers do not have the time or the resources to capture information that is already on record elsewhere.

So, the tool is called the ONI to reinforce the idea that, while needs identification initially begins at referral, it is an ongoing process to better identify, and hopefully meet, consumer needs.
3 How to complete the Contact Details

The contact details are designed for collection at the point of first contact with the consumer or when a referral to the trial is made. This first page of information can be completed by a staff member or by the consumer. When the ONI is in widespread use, this first page would be completed by the referral agency and either faxed or electronically transferred to the agency receiving the referral. The referral agency would also fax or transfer all other sections of the ONI.

The logical order for completion is to work down each column. The data items in the Contact Details sheet (ICI p.1 of 2) are shown in the following table.

<table>
<thead>
<tr>
<th>ITEM</th>
<th>Data type</th>
<th>Codeset</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
<tr>
<td>Box to indicate that the information on the form has now been updated, date, name and signature.</td>
<td>Alphanumeric</td>
<td>No</td>
</tr>
</tbody>
</table>

The remainder of this section provides a description of each item in the Contact Details sheet (ICI p.1 of 2).

**Unique Client Record Number**

A unique identification number issued by the trial. Any interchange of client identifier numbers must be performed in accordance with the trial guidelines.

**Title**

The title the person commonly uses.
Family Name
The consumer’s family name or surname.

Given Names
The consumer’s given name(s) or name by which they are commonly known.

Preferred Name/s
The name commonly used by the person. This can also be used to record any other names or aliases that the consumer commonly uses or by which they are commonly known.

Date of Birth
Record the consumer’s date of birth as accurately as possible in dd/mm/yyyy format. Where the exact date of birth is not known, a close approximation should be recorded.

Sex
The sex of the consumer. Where this is not apparent, record the sex as identified by the consumer.

Usual Address
The address where the consumer usually lives, which is usually (but not always) the consumer’s contact address for contact and case management purposes. Usual address is made up of the following elements:

- Street number and street name;
- Suburb/town/city;
- Postcode.
State is not required as it can be derived from the postcode.

If the person is homeless, the usual address should be used to record any way to contact the consumer. This may be nil or might be a particular venue where contact can be made. Some consumers may not wish to have a contact address disclosed. Remember that, if the person is homeless, you should do all you can to develop an initial action plan on the spot. Maintaining contact with a homeless person is difficult, as is organising services for them. Take the opportunity while you have it.

If the usual address is different from the contact address, record the contact address in the comments box.

Contact Address
Record if different from Usual Address. Collect same elements as Usual Address. Otherwise, leave blank.

Contact Phone Number/s (tick preferred)
The consumer’s contact telephone number to be captured for contact and case management purposes. Record work numbers if different from usual telephone. Otherwise, leave blank. The consumer’s mobile number (if one is available) for contact and case management purposes.

Who the agency can contact if necessary
Record the contact person/s and their relationship to the consumer. This might be the case manager, next of kin, carer, guardian, friend, or an emergency contact.
General Practitioner

The name and contact details of the consumer's usual General Practitioner. If none, leave blank. Note, however, that a consumer must have a GP to be eligible for the Complex Need Sub-Group (see page 4). If the consumer sees more than one GP, record the one identified by the consumer as their usual or preferred. If they see a GP in more than one place, record the most common place.

Comment box

Note any relevant directions or contact issues. Use this box also to record any particular requirements eg, ‘Mrs Brown does not answer phone. Contact daughter only’.

Office Use Only

Record who has completed the form, and the designation or agency. Note that ‘agency’ includes identifiable centres or agencies, GP practices and hospitals. Use the last box to sign and date any change to a new form, at which point the superseded form becomes part of the client’s record.
4 How to complete the Trial Entry Data Set

The contact details are designed for collection early in the process. This page of information should be completed by a staff member, rather than by the consumer. When the ONI is in widespread use, this page would be completed by the referral agency and either faxed or electronically transferred to the agency receiving the referral, along with all other relevant sections of the ONI.

The logical order for completion is to work down each column. The data items in the Trial Entry Data Set (ICI p.2 of 2) are shown in the following table. The data items include a number of items that have attached code sets that can be part of an electronic information system.

<table>
<thead>
<tr>

<td>Yes</td>
</tr>
<tr>
<td>OFFICE USE ONLY</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Name, agency, signature, date and contact number</td>
<td>Alphanumeric</td>
<td>No</td>
</tr>
<tr>
<td>Box to indicate that the information on the form has now been updated, date, name and signature.</td>
<td>Alphanumeric</td>
<td>No</td>
</tr>
</tbody>
</table>

The remainder of this section provides a description of each item in the Service Entry Data Set.

Unique Client Record Number

A unique identification number issued by the trial. Any interchange of client identifier numbers must be performed in accordance with the trial guidelines.

Government Pensioner/Benefit Status

Record whether the consumer receives a pension or other benefit from the Commonwealth government by selecting the code for the pension or benefit type. Record any relevant card number in the box. Likewise, record Medicare and (if relevant) Health Care Card and National Diabetes Supply Scheme numbers in the boxes.
DVA Card Status
Record the consumer’s Department of Veterans’ Affairs (DVA) Card Status by using the codeset. Record any relevant card number in the box.

Insurance Status
Record the current insurance status of the consumer including the level of private health insurance (if any) and/or whether the consumer is eligible for services paid by a third party payer such as motor vehicle accident insurance, Workers Compensation or Ambulance Fund. The primary purpose of this item is to allow a health professional to know whether the consumer can access privately funded services such as private dental and allied health services. Where relevant, record the appropriate card number in the box provided.

Literacy and numeracy
There are three items to indicate whether the person has problems with literacy and numeracy. They cover problems with reading, writing and numbers. If a person has difficulty in any of these areas, take it into account when considering their initial action and care plans. Literacy and numeracy is of particular relevance in considering whether a person can access and use written information and can manage their daily tasks of living such as managing their money and managing their own medicine. Problems with literacy should also be taken into account when asking a person to sign a consent form.

Trial Eligibility Checklist
See page 2.

Trial Sub-Group
Participants in the trial need to be allocated to either the Complex Need Group or the Population Health Group (see page 3 and Figure 1). However, it may be possible to immediately determine which group. This will be the case when the person has health conditions or might be at risk but further assessment is required before this can be determined. In this case, screen with the ONI tool. The outcome of that will then determine whether you invite them to join the Complex care Group or assign them to the Population Health Group.

The criteria for the Complex Need Group have been embedded in the ONI as summarised in Table 4. Use the information in this table to assign the person to a trial sub-group.

Table 4 Evidence in the ONI that the consumer meets the criteria for the Complex Need Group

<table>
<thead>

</tr>
<tr>
<td>The person is a resident ageing carer of a person who meets all of the above criteria</td>
<td>Carer Profile</td>
</tr>
</tbody>
</table>
Consent checklist

There are two questions to indicate on the form whether or not the person has given consent to be in the trial and whether or not a signed consent form has been provided to the trial. Note that this is not the consumer consent form (there is a different form for consent), simply a checklist so that providers involved in the person’s care know whether consent has been given.

Other comments

Use this comment box to record any other relevant information.

Office Use Only

Record who has completed the form, and the designation or agency. Note that ‘agency’ includes identifiable centres or agencies, GP practices and hospitals. Use the last box to sign and date any change to a new form, at which point the superseded form becomes part of the client’s record.
5 How to complete the ONI Summary and Action Plan

The items on **ONI p.1 of 2** cover a summary of the identified needs and current services. Most information on this page will be able to be completed at the end of the process. When the ONI is in widespread use, this page would be completed by the referral agency and either faxed or electronically transferred to the agency receiving the referral, along with all other relevant sections of the ONI.

Use this page to record presenting problem/s and issues of relevance for the consumer. The top heading asks for one or more short statements of why the consumer is seeking services then the box is used to note the action required. A code set is provided to record the action required.

Any other issues (which may be unrelated to the reason for seeking services) that arise in your conversation with the consumer should also be recorded here. This other information might be based on discussion with the consumer, observing the consumer, information contained in a referral letter, client notes or information provided by a third party, such as a friend, relative, carer or referring agency. This will include any issues arising from the supplementary profiles. Codes are used for the action required and all other information is alphanumeric.

In both cases, list the issues in priority order. The first issue listed is the one that is of most importance to the consumer. Complete remaining issues in the priority order of the consumer. If more than 10 issues, start another page.

<table>

</tr>
</tbody>
</table>

Note that, while this is the first section of the ONI summary and action plan, it may not be completed until you have completed the next steps in the ONI process. The ONI is designed in this way because it makes best sense to professionals receiving any subsequent referrals.

**Unique Client Record Number**

A unique identification number issued by the trial. Any interchange of client identifier numbers must be performed in accordance with the trial guidelines.

**Consumer problems and issues**

The first set of boxes are for a description of the problem or issue as identified by the consumer or the referring agency, and the second set is other issues identified by the consumer or through the needs identification process. It is completed based on all sources of information available to the person completing them (observation, answers to questions, information contained in a referral letter, client notes or information provided to you by a carer or referring agency). To elicit this information directly from a consumer or carer, the sorts of questions you can ask might be: ‘Can I ask you about some other issues that often impact on peoples health?’ or ‘Are there any other issues you’d like to discuss or concerns you have?’ The list of problems and issues can be updated over time. Use the ‘information updated’ section to indicate that the situation has changed.
**Action required**

Codes are used for ten types of possible action associated with the problems or issues. They fall into 3 categories:

**Services are required that do not need, or cannot wait, an assessment**

Code (1) Service provision – see Initial Action Plan

**An assessment is required**

Code (2) Specialist assessment (eg, mental health assessment)

(3) Comprehensive assessment (eg, aged care assessment)

**No further action is planned**

The purpose of this item is, in part, to capture unmet demand. This item also captures situations where the issue is addressed at first contact. There may be two or more reasons for no further action. If so, enter both codes. For example, a consumer may refer elsewhere because the requested service was not available. In this case, enter 5 and 9.

Code:

(4) Nil: Consumer ineligible for service.

(5) Nil: Referred elsewhere.

(6) Nil: Advise/information provided. No further action required.

(7) Nil: Consumer declines further referral or service.

(8) Nil: Consumer issue resolved. No further action required.

(9) Nil: Requested service not available.

(10) Nil: Requested service not accessible (eg, due to long waiting time, inaccessible location).

**Current services**

The prompts for services are listed alphabetically, including self-help. Use this box to record details of services used by the consumer in the last three months. The purpose of listing services used is twofold. First, the information will often suggest consumer problems and issues that have not been identified to this point. If so, consider whether any supplementary profiles need to be completed. This additional probing will need to be age-appropriate. Second, current service utilisation will need to be taken into account in formulating an initial action plan and, if necessary, in developing a care plan.

Ask the consumer whether they have used any other services in the last 3 months. If the consumer reports that they have used other services, ascertain what they are and whether the consumer is still in contact with the service.

**Page 2 (ONI p.2 of 2)** prompts for additional screening profiles to be used and summarises the initial action required.

</tbody>
</table>
Only after completing the relevant supplementary profiles should you finalise page 2 of the ONI.

**Other consumer issues**

The relevance of other consumer issues can begin to be noted at this point and the tick boxes may prompt one or more profiles to be completed. Take into account the consumer’s presenting problems and issues as well as all other information available to you. This other information might be your judgement based on interviewing or observing the consumer, information contained in a referral letter, client notes or information provided by a third party, such as a friend, relative, carer or referring agency. If there is any suggestion that the issue is relevant for the consumer, complete any relevant domains in the supplementary profiles. Also take into account the trial’s requirements as set out in Table 1 and Table 2. Consider:

- Living Arrangements, including issues about informed consent if the consumer’s decision-making capacity is in doubt.
- If carer issues are relevant, complete the Carer Profile and consider whether completing a separate ONI on the carer might be useful.
- Health Conditions.
- Psychosocial issues, including mental health and well being and disability.
- Functional dependency, including the domestic, self care, cognition and behaviour domains of function.
- Health Behaviours, risk factors and opportunities for health promotion.
- Environmental issues, including home safety, access, home maintenance, pets.

**Initial Action Plan**

The Initial Action Plan can describe a referral pathway for consumers who need further assessment or those with complex problems and help keep track of how progress is going and whether any variation needs to be made to the initial plan of care. The columns capture more detail on what information the consumer has consented to share, and has codes for how the referral is being made, what transport is to be used, and what feedback is required.

This section of the ONI draws together all of the other key information collected in the ONI process and uses it to outline an initial action plan. It should be completed only after completing any relevant supplementary profiles. This plan has 8 components:

- **Agency/health professional**: Complete in legible text. If you will be continuing to see the consumer, include yourself in the list of agencies/professionals for referral.
- **For**: Record purpose of referral in legible text.
- **If there is some reason for urgency, write ‘urgent’ in this column (eg, urgent assessment) and, if appropriate, use the Alert box to draw attention to the reason for the urgent response (eg, carer admitted to hospital today).
- **Consumer Consent**: Record:
  1. Yes, consumer consents to referral and to sharing of information as specified on consumer consent form
  2. Yes, consumer consents to referral but not to sharing of information
  3. No, consumer has not consented to this referral.
- **Referral method**: Record:
  1. This form faxed to agency
  2. Letter (copy on file)
  3. Electronic
  4. Verbal request – face to face or phone call
  5. Other (includes referral to self).
Transport Method: Use this column to record how the consumer and the service will actually get together. Record:

1. Staff travel – service is delivered in home (e.g., domestic assistance)
2. Staff travel - client too unwell to travel
3. Staff travel – client has no transport
4. Client travel – own car
5. Client travel – family/friends
6. Client travel – public transport or taxi
7. Client travel – walk
8. Community transport
9. Ambulance
10. Hitchhike
11. None (e.g., telephone service to be provided).

Feedback required: Record:

1. to initial referral agency
2. to GP
3. to agency completing ONI
4. to carer/guardian
5. other (if other, record details in comment box)

Note that, if feedback is required, contact details will be required on page 2 of the ICI.

Date: Record date referral actually made. If no referral actually made, leave blank

Review Date: Record date when proposed action should be reviewed. If no review is required, leave blank.

Both pages 1 and 2 of the ONI (Summary and Action Plan) may be used in a duplicate fashion to cover multiple problems with differing levels of confidentiality requirements. It can be used this way if the information is sensitive and not to be shared, in which case the interviewer can complete a separate copy of ONI page 1 of 2 for each issue. For example, there may be 2 issues – seeing the podiatrist and getting referred to a sexual assault service – and it would be inappropriate to share all information for both referrals.

Alert Box - Using the ONI to record risks and urgency

Page 2 of the Summary and Action Plan has an Alert box that can be used to make a note of risks and questions of urgency. Summarise any issues here according to how you judge the possibility of danger, loss of social participation or reduction in health status. Consider whether to trigger your own agencies alert procedures and whether this should be indicated in the box.

Office Use Only

Record who has completed the form, and the designation or agency. Note that ‘agency’ includes identifiable centres or agencies, GP practices and hospitals. Use the last box to sign and date any change to a new form, at which point the superseded form becomes part of the client’s record.
6 How to complete the Living Arrangements profile

Use this profile if you have any reason to believe that there are issues in relation to the person’s housing and living arrangements, their employment status and any relevant financial or legal issues, including decision-making capacity.

The data items in the Living Arrangements profile are amenable to electronic recording and reporting for associated minimum data sets. The data items in the Living Arrangements profile (LAP p.1 of 1) are shown in the following table.

<table>

Living arrangements

Find out what living arrangements the person has – whether they live alone, with family or with others – by asking questions like ‘Who lives in the house with you?’ ‘Do people frequently move in and out of your house?’ The person’s living arrangements need to be taken into account in formulating an initial action plan and, if necessary, developing a care plan. They will often flag risks and urgency. Make any comments or summary notes on living arrangements and family situation in the box provided. Note that there is a separate carer profile that might also be relevant.

Evidence / source – HACC MDS

Accommodation

Codes are provided to record the consumer’s accommodation type. There are 16 different possibilities listed and these are compatible with the codes in the HACC MDS. Record any relevant comments on accommodation difficulties or issues in the comment box. Accommodation status is important if home modifications are required to make the home safer.

Evidence / source – HACC MDS

Employment status

Ask about the person’s current employment status and occupation, record status using the codes and record any relevant comments or notes. Note that the financial and legal profile on this form includes a question about cost of living decisions that is relevant to financial hardship arising from unemployment.

Evidence / source – modified from the NMDS for Medical Rehabilitation
Financial and legal profile

Legal issues might include any relevant court orders or mental health or guardianship orders, depending on the person’s circumstances and presenting problems. Under decision-making responsibility consider whether the person is capable of making their own decisions.

If, in your opinion, the answer to the question about decision-making capacity is ‘not sure’ or ‘no’, consider the need for assistance, the need for a cognitive assessment and the implications for consent.

Financial issues might include whether a person is capable of making their own decisions about financial matters or whether there is some financial risk in their immediate circumstances. The person’s financial situation may need to be taken into account in assessing risks and urgency and in formulating an initial action plan and, if necessary, developing a care plan.

Evidence / source – based on review of current practice in Victoria

Cost of living decisions. It is useful to inquire as to whether there are any trade-offs the person makes because of financial difficulties, by asking: ‘Because of limited income, has the consumer during the last month made any trade-offs among purchasing any of the following: prescribed medications, necessary medical care, adequate food, home care, necessary transport?’ If yes, discuss issues with the consumer and consider the need for counselling (eg financial, gambling) and need for material support. This question can generate important information to allow you to assess both risk and urgency.

Evidence / source – This question has been modified from the MDS-HC, an instrument developed in the USA for a minimum data set for home care. The validity and reliability of this item for Australian populations is unknown, however it would appear to have content validity.

Comments
Consider all the issues such as the need for material assistance and decision-making and use the box at the bottom of this section for any relevant comments and to summarise the required action.

Office Use Only
Record who has completed the form, and the designation or agency. Note that ‘agency’ includes identifiable centres or agencies, GP practices and hospitals. Use the last box to sign and date any change to a new form, at which point the superseded form becomes part of the client’s record.
7 How to complete the Carer profile

Use this profile if the person has a carer. The data items in the Carer profile are amenable to electronic recording and reporting for associated minimum data sets. The data items in the Carer profile (CP p.1 of 1) are shown in the following table.

<table>

Carer Profile

The Carer Profile has codes for recording availability, residency and the relationship of the carer to the care recipient.

Evidence / source – HACC MDS

There is also a section on supports available for the carer and on current threats to carer arrangements and whether the carer arrangements are sustainable.

Carer Support

This set of items covers carer support and is recorded as 'Yes', 'No' or 'Not sure'. There are four dimensions of care support covering whether the carer has someone to help them, whether they receive a payment or allowance, whether they have been given information about support services such as respite, and whether they need any practical training in tasks such as lifting or administering medicines.

Evidence / source – These items are modified from the Illawarra Carer Survey, DADHC 2002.

Current threats to carer arrangements

Current threats to carer arrangements are described by a series of six self-explanatory codes and the item asks the screener to tick all that apply:

1. Carer – emotional stress and strain (if so, consider completing a Psychosocial Profile on the carer)
2. Carer – acute physical exhaustion/illness (if so, consider completing the Health Conditions and Psychosocial Profiles on the carer)
(3) Carer – slow physical health deterioration (if so, consider completing the Health Conditions and Psychosocial Profiles on the carer)

(4) Carer – factors unrelated to care situation (eg, carer moving away or taking on a new job)

(5) Consumer – increasing needs (including physical health deterioration)

(6) Consumer – other factors

These codes can be used as prompts to guide your conversation with the carer or referral agency. Based on your conversation, determine whether current carer arrangements are sustainable without additional services or support and record one of the following 5 codes:

(1) No, have already broken down (the situation is an immediate crisis)

(2) Yes, but only weeks (without additional services or support the arrangements will break down within a matter of weeks)

(3) Yes, months (without additional services or support the arrangements will break down within a year)

(4) Yes, years (without additional services or support the arrangements could eventually break down, but not likely within the next year or two)

(5) Don’t know (in which case, consider the need for referral and assessment).

As with other items on the form, simply record a code of 99 if carer issues are not relevant.

Evidence / source – HACC MDS with additional items modified from the Illawarra Carer Survey

If there are significant carer issues, complete a separate ONI on the carer, and/or make the appropriate referral to a carer support agency or information service.

The Carer Availability option has a code (4) Not Applicable – the consumer is the Carer. This option is selected when a separate ONI is completed on the carer.

Comments

Consider all the issues such as the need for material assistance and decision-making and use the box at the bottom of this section for any relevant comments and to summarise the required action.

Office Use Only

Record who has completed the form, and the designation or agency. Note that ‘agency’ includes identifiable centres or agencies, GP practices and hospitals. Use the last box to sign and date any change to a new form, at which point the superseded form becomes part of the client’s record.
8 How to complete the Health Conditions profile

This profile is for health issues including self-rated health, bodily pain, interference with normal activities, vision, hearing and falls. Issues listed in the Health Conditions section are based on self-report by the consumer, and as such should not be considered to be diagnoses. A separate section on Medical Diagnoses allows for the screener to identify medical diagnoses made by a medical practitioner.

If there are problems reported, consideration should be given to medical referral and further inquiries about activities of daily living and screening for further assessment by completing the Functional Profile. The data items in the Health Conditions profile (HC p.1 of 2) are shown in the following table.

### ITEM | Data type | Code set
---|---|---
CLIENT IDENTIFIER | Alphanumeric | No
Unique Client Identifier | Scale tick box | Yes
Overall health | Scale tick box | Yes
Bodily pain | Scale tick box | Yes
Interference with normal activities (past 4 weeks) | Scale tick box | Yes

**Overall health**

This question is selected from the SF-36. This question has been widely used and is in current use in the DVA D677 and the D673. Self reported health agrees well with objective measures of health. It has been found to be a good predictor of subsequent illness and premature death.

In asking the consumer about their overall health inquire about how they are going and whether they have experienced any recent changes in their health. If the consumer reports that they have had significant changes, ascertain whether the consumer is already under the care of a medical practitioner and whether they have told their medical practitioner about the changes.
If the consumer reports poor health, consider completing the Functional Profile and the Psychosocial Profile.

**Bodily pain**

Consider whether the consumer may be experiencing bodily pain. If so, ask questions such as ‘How much bodily pain have you had during the past 4 weeks?’ If the consumer reports that they have had significant bodily pain, ascertain whether the consumer is already under the care of a medical practitioner and whether they have told their medical practitioner about their pain. If not, refer the consumer back to their GP. Consider whether pain is impacting on their ability to manage activities of daily living (see Functional Profile) or on their personal or social relationships (see Psychosocial Profile). If so, complete the relevant profile.

**Interference with normal activities**

Use the question ‘How much did your health interfere with your normal activities (outside and/or inside the home) during the past 4 weeks?’ to score the consumer (or have them score themselves) on the scale. Score from ‘not at all to quite a bit’ and identify and record any issues that may require action. If problems are identified, complete the Functional Profile to screen for assessment on activities of daily living.

**Vision, hearing and falls**

Tick the box to indicate the description that best matches the consumers situation. If the question is irrelevant or the information is not known, record NA. If problems are identified, complete the Functional Profile.

**Height and weight**

Record actual height and weight and use these to calculate the Body Mass Index (BMI).

\[ \text{BMI} = \frac{\text{weight in kg}}{(\text{height in m})^2} \]

**Blood pressure/pulse**

Record actual readings.

**Oral health**

Use the diagram to indicate missing teeth, untreated caries or other oral health problems such as gum disease. Use the comment box to note significant oral health issues and to identify whether the person is eligible for any free or subsidised oral health services.

Oral health is a significant health issue for many people but, with rare exceptions, cannot be funded by the trial. Services for people under 18 years are free (but difficult to obtain) through the public health system. If a person has health insurance or is covered by DVA or is able to pay for their own dental care, refer to a private dentist. If not, refer young people to a public sector dental therapist. If a person’s oral health problems are significant to the point that they are impacting on their overall health and well-being, contact the trial to discuss whether any assistance can be provided.

**Feet**

Use the tick boxes to record whether the person has any foot problems and the comment box to record the details.
**Vaccinations**

Tick any vaccinations that the person has had and record the date for each. If the actual year or date is not known, record an approximation.

Evidence / source – EPC assessment item.

**Fit to drive**

Use the tick boxes to indicate whether or not the person is fit to drive and the comment box to note any issues. Refer to the AustRoads Guidelines for further information.

Evidence / source – EPC assessment item.

**Continence**

There are 3 questions relating to continence, 2 relating to urinary continence and 1 to faecal soiling or change of bowel habit. Tick the appropriate boxes and record details in the comment box. If there are any problems, refer the consumer back to their GP. If continence is an issue, and continence aids are required, refer the consumer to the National Continence Scheme and/or PADP.

Evidence / source – EPC assessment item.

The data items in the Health Conditions profile (HC p.2 of 2) are shown in the following table.

**Health conditions**

In considering health conditions, check whether the consumer may have had any relevant problems in the past that might be related to their present problem. This may include overall health, hospital stays, medical interventions or other conditions or disabilities. If the consumer has any allergies or other medical conditions that should be known by a health professional treating the consumer, record them in this box.

Also inquire about any current conditions the consumer may have that have been long-standing, persistent or recurrent. Use questions such as ‘Do you have any health conditions that interfere with your normal activities that are long-standing or recurring?’ to identify and record any conditions that may require action. Age appropriate questions may also be useful. For example, for older people consider questions such as ‘People in your age group sometimes have problems leaking urine. Does this sometimes happen to you?’ If the consumer reports that they have a chronic condition, ascertain whether the consumer is already under the care of a medical practitioner and whether any plan of long term management, coordinated care or self-help is already in place.

If the consumer is pregnant, record the details and make sure that they are receiving antenatal care. If not, make the necessary arrangements.
Medical diagnoses

If the Health Conditions profile is being completed by a medical practitioner, use this section to record the diagnoses. If it is completed by other disciplines, a medical diagnosis should only be recorded if there is written evidence that a medical practitioner has confirmed the diagnosis. If not, record the condition under ‘Health Conditions’ (see above) and complete it based on what the consumer tells them. There are different medico-legal implications depending on who completes the profile, so non-medical staff should be clear about not recording their own versions of diagnoses.

Current medicines

The medication section relates to all medicines, including over the counter, bush medicine and alternative treatments. Identify the number of medicines the consumer is currently using. Use questions like: “Please tell me the names of your prescription medicines and how often you take them?” “Do you take them the way your doctor wants you to take them? (if no: why not?)” “Is there someone who helps you take the medicines the way your doctor wants you to, or do you handle this yourself?” “Please tell me the names of your medicines for which you do not need a prescription (ie over-the-counter)?”

Note that in some cases consumers may be taking another person’s medicines or they may be sharing medications with a partner or spouse. If appropriate to the conversation you are having, or if there is some suggestion that circumstances such as this might apply, explore whether any problems exist from issues such as sharing of medicines.

Poly-pharmacy may suggest that a medication review is required. If so, seek the appropriate referral pathway. Home medication reviews can be carried out by the GP and pharmacist with the client’s consent.

The inability to manage your own medicine (the right medicine, in the right dose, at the right times) is an indicator of problems in managing activities of daily living. If problems are identified, complete the Functional Profile. In some cases, it may also indicate cognitive impairment. If there are no physical reasons why the consumer cannot manage their own medicine, consider the need for a cognitive assessment.

Cooperation with treatment

There are 3 questions about cooperation with treatment, 2 of which relate to medicine. The first asks whether the person currently takes their own medicine while the second asks about whether they are willing to do so. Note that a person may not manage their own medicine even though they are willing to do so (eg, if the person has memory problems, they might just forget). The 3rd asks about general cooperation with health professionals.

Take these factors into account when formulating your initial action plan.

Webster Pack or similar

This question asks whether the person uses pre-packaged medicines. If the person’s compliance with medicine would be improved by having access to it pre-packaged, make the necessary arrangements.

Home Medicine Review (HMR)

The use of multiple medicines (poly-pharmacy) or the use of single medicines over a long time may suggest that a Home Medicine Review (HMR) is required. If so, refer the consumer back to their GP.

Comment box

Use this box to summarise information on health conditions on this form or to capture any new information arising from questions such as ‘Can you think of any other issues that interfere with your normal activities (outside and/or inside the home)?’

The profile does not contain a list of all the possible health risks and problem conditions that might need further investigation. For example chronic or degenerative diseases, diabetes, cardiovascular disease, lung function, falls and so on might be present, and can be noted in the comment box.

Evidence / source – Modified from the Life Skills Profile (Rosen et al. 1989).

Webster Pack or similar

This question asks whether the person uses pre-packaged medicines. If the person’s compliance with medicine would be improved by having access to it pre-packaged, make the necessary arrangements.

Home Medicine Review (HMR)

The use of multiple medicines (poly-pharmacy) or the use of single medicines over a long time may suggest that a Home Medicine Review (HMR) is required. If so, refer the consumer back to their GP.

Comment box

Use this box to summarise information on health conditions on this form or to capture any new information arising from questions such as ‘Can you think of any other issues that interfere with your normal activities (outside and/or inside the home)?’

The profile does not contain a list of all the possible health risks and problem conditions that might need further investigation. For example chronic or degenerative diseases, diabetes, cardiovascular disease, lung function, falls and so on might be present, and can be noted in the comment box.

Office Use Only

Record who has completed the form, and the designation or agency. Note that ‘agency’ includes identifiable centres and agencies, GP practices and hospitals. Use the last box to sign and date any change to a new form, at which point the superseded form becomes part of the client’s record.
9 How to complete the Psychosocial Profile

The psychosocial profile is used to screen for psychosocial issues including emotional and well being, personal and social support, family and personal relationships and eligibility for disability services.

The psychosocial profile is not a diagnostic tool, nor is it a mental illness profile. The focus of this profile is on emotional well being, not mental illness, and on prevention and early identification rather than diagnosis and treatment. It captures some common risk factors associated with mental health problems (such as lack of social supports) and so identifies opportunities for prevention. It also includes a screen (K-10) that can be used for the early identification of individuals who may have, or be at risk of developing, high prevalence psychological problems such as anxiety and depression. It does not screen for low prevalence mental illnesses or disorders such as psychosis.

**Emotional wellbeing**

Use the K10 scale to probe for signs of emotional wellbeing such as depression, anxiety and coping ability. Record the total score. This is a scale of psychological distress developed for use in population surveys.

Rather than being used as a guide to conversation, the K10 is often best undertaken as a series of structured questions, as detailed in the profile. Preface the questions with a comment such as “I’d like to ask you some questions about how you’ve been coping over the last month. We routinely ask these questions of everyone…‘(caring for another person’, ‘who has had a recent illness’, ‘who is seeking counselling services’ or whatever is appropriate in the circumstances). This approach is non-judgemental. It probes these issues without any implication that this specific consumer is not coping. Ask “in the past four weeks about how often did you feel…”

This 10 item scale has five response categories and the score is the sum of those responses. The score range is from 10 to 50. People who score 0-15 have one quarter the population risk of meeting criteria for an anxiety or depressive disorder as identified by the Composite International Diagnostic Interview (CIDI), and a remote chance of reporting a suicidal attempt in their lifetime. People who score 16-30 have a one in four chance (three times the population risk) of having a current anxiety or depressive disorder and 1% chance (three times the population risk) of ever having made a suicide attempt. People who score 30-50 have a three out of four chance (ten times the population risk) of meeting criteria for an anxiety or depressive disorder and 6% chance (20 times the population risk) of ever having made a suicide attempt.

The recommended action is to refer for a primary care (GP) mental health assessment if the total score is 16-29 and for a specialist mental health assessment if the score is 30 or more.

Evidence / source – Kessler R, School of Public Health, Harvard University, Boston (unpublished manuscript).

Sleeping difficulty
Use this question as another opportunity to identify emotional issues and worries. If sleep is a problem, explore whether this is a long or short-term issue. Consider a GP referral or a referral to a stress management program if sleeping is a problem.

Evidence / source – EPC assessment item.

Personal and social support
Use this question if you feel that it is appropriate to the consumer’s presenting problems: “During the past 4 weeks...Was someone available to help you if you needed and wanted help? For example if you...
- felt very nervous, lonely or blue
- got sick and had to stay in bed
- needed someone to talk to
- needed help with daily chores
- needed help just taking care of yourself”

If the consumer has little support consider referral and the possibility of completing a Functional Profile. The person’s social support situation may need to be taken into account in formulating an initial action plan and, if necessary, developing a care plan. It is also a known indicator of both risk and urgency.

Evidence / source – Dartmouth COOP Charts. It has a convergent correlation of 0.61 with the Medical Outcome Study for social support (Nelson et al. 1998).
## Family and personal relationships

Ask about the person's current personal and family relationships – whether they are experiencing any particular difficulties and record the response in the comment box.

Ask the consumer whether they have any other relevant family or personal problems that might be related to their presenting issue or to their mental well being or social relationships. Identify and record any issues that may require action.

## Stolen generation

There are 2 questions on stolen generation issues. The first simply asks whether the consumer, or members of their family, are from the stolen generation. The second asks whether stolen generation issues are currently having an impact on the consumer. The emphasis is on how the consumer feels now and the impact on life and relationships. There is a comment box to note important issues.

Evidence / source – Designed for trial

## Relationships with service providers

This question seeks to identify whether the consumer mistrusts health and community service providers because of what they see as bad experiences with providers and government agencies in the past. This might include legal services (policy, custody disputes in court, divorce), health services (hospitals, doctors), schools, community services (health, welfare) or social security (pensions, benefits or other entitlements).

Evidence / source – Designed for trial

## Disability

Check if the person is eligible for disability support services and whether an assessment is required. The tick box format for the criteria can be used to summarise the information. If so, consider referral to a specialist disability agency.

Evidence / source – DHS, Victoria

## Office Use Only

Record who has completed the form, and the designation or agency. Note that ‘agency’ includes identifiable centres or agencies, GP practices and hospitals. Use the last box to sign and date any change to a new form, at which point the superseded form becomes part of the client’s record.
10 How to complete the Functional Profile

The information collected on the Functional Profile is used to screen for any difficulties the consumer may have in activities of self care and daily living, things that we all need to do as part of our daily lives. The questions refer to how the consumer is managing at present and should be used to formulate an initial action plan and, if necessary, to develop a care plan.

Other information obtained in the process of completing this profile may also be used to recommend referrals for further assessment in the domains of self care, domestic, behavioural and cognitive functioning. Specific trigger points for these referrals have been developed on the basis of research to develop national measures of functional dependency for HACC and aged care programs. They are also explained on page 2 the form.

The items on pages FP p.1 of 2 and FP p.2 of 2 are shown in the following table:

Activities of daily living (functional screen)

Using this profile, you can screen for the consumer’s needs over the four functional domains measured through scores on 9 questions. The screen does not attempt to capture all aspects of function. Rather, the 9 items in the screen have been selected because they are good predictors of how well a person is functioning in other aspects of their life.

Housework, travelling and shopping are domestic tasks that are generally lost early. A consumer who is independent in these tasks does not usually require a more detailed assessment of domestic or self-care tasks.
Mobility and bathing are *self-care tasks* that are generally lost later than domestic abilities but earlier than self-care tasks such as feeding or toilet use. A consumer who is independent in mobility and bathing does not generally require more detailed assessment of self-care tasks.

The screen includes 2 items (managing your own medicine and managing your money) that not everyone is comfortable in asking or answering. However, their usefulness justifies their inclusion. Their power as screening questions is that they not only act as screens for domestic functioning. They are also reasonable predictors of cognitive and/or behavioural problems. These are very difficult domains to screen for (you can hardly ask the consumer at 1st contact if they have difficult or challenging behaviour or get confused!) but they are important indicators of a person’s needs. For this reason, screening often has to be more indirect (and therefore isn’t quite as accurate).

But, unless there are other indicators (for example, information supplied by a carer), a consumer who is independent in medication and money management usually does not require more detailed assessment of cognition/behaviour. Other indicators of challenging behaviour and cognitive functioning comprise the last two items in the screen.

The 7 items on page 1 are hierarchical so, if the consumer does not need help in doing housework and getting about, there is no need to ask about mobility and bathing. On page 2 items 8 and 9 are about cognition and behaviour and are asked of third party informants, not the consumers themselves.

Scoring instructions and an explanation of the way to use the scores to trigger the recommended functional assessments, are included on the form itself, as is a space for comments or other issues raised by the Functional Profile.

**How to undertake a functional screen**

The screen is designed for telephone administration or may be administered face-to-face.

It is suitable for administration to a consumer or to a carer, friend or other person (eg, service provider) who may be contacting the care coordinator or service provider on behalf of a consumer.

**Part One** of the screen is to be asked of the client, or the carer, friend, or other person. Where a carer, friend or other person is being questioned, the questions refer to the functional abilities of the client.

The interviewer should inform the respondent that a brief screen is to be undertaken.

After reading the introduction, the interviewer should carefully and clearly read each item (one item at a time), along with the options, to the respondent. The questions should be asked exactly as they are written. The questions ask ‘Can you…?’ rather than ‘Do you…?’ since some clients may not, for example, do the housework because their spouse or carer does it for them, yet be quite capable of undertaking it themselves.

We call this difference ‘*Can Do:*Do Do’. The task is to rate what a person ‘can do’ rather than what they ‘do do’.

There are three main points to emphasise about how to complete the screen:

1. Rate what the person is capable of doing rather than what they do. Take into account the help that is required and the amount of prompting – if someone can do something but has chosen to have someone else do it (like dressing), rate as independent. If help or prompting is involved, rate as 1. If unable to do the task, rate as a 0.

---

2. Where an item is not relevant (e.g., client does not use medicine), rate what the person would be capable of doing if the item were relevant to their situation.

3. Make sure the ratings, especially of items regarding standards of cleanliness, are based on the person’s own social or cultural context, not your own.

Answers are limited to specific categories but the structure for the 7 questions in part 1 is the same. If the respondent does not answer with an option, or qualifies the option, the options should be repeated and the respondent asked to select the option which best describes the situation.

The interviewer scores each item according to the answer given by the respondent. If a respondent will not, or cannot answer a question, the score box should be marked with a cross (x), to indicate it was not answered. If the answer box is left blank, it will be assumed that the question was not asked.

Part Two of the screen is not suitable for you to ask the client. You complete it based on all information available to you – your judgement based on interviewing or observing the client, information contained in a referral letter, client notes or information provided by a proxy respondent, such as a friend, relative, carer or referring agency.

Further information on the functional screen can be found by going to the CHSD website and downloading the HACC Functional Screening and Assessment Manual⁠¹⁰.

**Part One: Questions to ask the client (or the person who represents the client)**

**Unique client ID**
Use your own agency identifier.

**Items 1 to 7:**
These are self-explanatory. The questions should be read exactly as they appear. The respondent is to select only from the options provided.

**Ratings:**
- 2 = without help
- 1 = with some help
- 0 = completely unable to do

**Notes on ratings**
'X' to be used where the client will not or is unable to answer the question. A code of 9 indicates that the interviewer did not ask the question. A cognitively impaired person or a person with an intellectually disability who is able to do tasks with verbal prompting should be rated as scoring a 1.

**Part Two: Questions for you to complete**

**Ratings** (Items 8 and 9)
- 0 = yes (presence of reported cognitive or behavioural problem)
- 2 = no (no evidence of any cognitive or behavioural problem)

**Notes**
The purpose is simply to rate yes or no, rather than ‘why’ or ‘how much’. ‘Why’ and ‘How much’ needs to be determined through a more thorough assessment.

---

What to do with the screening information once you’ve collected it

- Use the guidelines on the form to guide your decision about whether the consumer needs a more comprehensive assessment. They are guidelines only and you should use your own judgement. These guidelines will inevitably be refined over time as screening becomes routine and as expertise develops. Practical issues such as the availability of comprehensive assessment services and the urgency of the person’s needs should also guide your decision.

- If the person has low or moderate functional needs and does not need further assessment, use the information to decide whether the consumer needs services and, if so, what it is they need. The functional screening results alone will not be sufficient for this as you will need a range of other information (eg, information about carers and social supports, financial resources). This information is collected in other profiles. Use all of the information you have to develop an initial action plan or care plan.

Aids and equipment currently used

The last section of the functional profile (FP p.2 of 2) has tick boxes for any aids and equipment that the consumer currently uses. The definitions of the codes used in this section are contained in the following table. These codes come from the HACC MDS but they are being used in the ONI in a different way. In the ONI, the item captures what aids and equipment the person currently has. In the HACC MDS, it captures what the HACC service provided.

<table>
<thead>
<tr>
<th>Code Label</th>
<th>Code Label Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Self-Care Aids</td>
<td>These aids assist the client in their day-to-day routines of cooking/eating and personal hygiene. Examples of such aids are special crockery/cutlery, bath rails/shower rails, buttonhooks, bowel and urinary appliances etc.</td>
</tr>
<tr>
<td>Support and Mobility Aids</td>
<td>Aids mentioned here provide the client with ease of mobility as well as supportive mechanisms while at rest. Support aids include callipers, splints, special beds, cushions/pillows etc. while mobility aids include belts, braces, crutches, wheelchairs (manual and motorised) etc.</td>
</tr>
<tr>
<td>Communication Aids</td>
<td>These aids help the client with their inter-personal interaction and are inclusive of telephone attachments, writing aids, speaking aids (electrolarynx), intercom etc.</td>
</tr>
<tr>
<td>Aids for Reading</td>
<td>These are reading specific aids provided to clients and comprise of items like magnifying/reading glasses, Braille books, reading frames etc.</td>
</tr>
<tr>
<td>Medical Care Aids</td>
<td>Aids described in this category serve to provide assistance to clients with specific medical conditions. They include breathing pumps, pacemakers, Ostomy/Stoma appliances etc.</td>
</tr>
<tr>
<td>Car Modifications</td>
<td>These aids allow clients access to safe and comfortable transportation, either as the driver or passenger of the vehicle. They are inclusive of accelerator/brake/mirror and other driver related controls as well as other modifications like automatic transmission and room for wheelchair etc.</td>
</tr>
<tr>
<td>Other Goods/Equipment</td>
<td>This category of aids includes all items which lie outside the range of the above mentioned codes.</td>
</tr>
</tbody>
</table>

Office Use Only

Record who has completed the form, and the designation or agency. Note that ‘agency’ includes identifiable centres or agencies, GP practices and hospitals. Use the last box to sign and date any change to a new form, at which point the superseded form becomes part of the client’s record.
11 How to complete the Health Behaviours profile

Use this form to record information about the person’s lifestyle and to identify any opportunities that may be available to improve their health and well being. The questions are in the form of tick boxes, except for the nutrition screen, which gives a total score that can be used to indicate risk. The items are listed in the table below:

</tbody>
</table>

Regular health checks

Use your judgement to ask about likely issues: Have you had any health checks recently (eg a mammogram/pap smear or prostate check)? The question on health checks might cover breast screening for women 50 years and older within the recommended time frame (last 2 years) and, for the pap smear question, women of all ages. This should apply to teenagers and not just adults.

Risk factors

The opportunities for health promotion in the community are almost limitless. The results of the Australian Burden of Disease Study\textsuperscript{11} offer some guidance as to which risk factors could most profitably be targeted by the ONI. These results and other relevant studies are discussed in the associated literature review undertaken to determine the most useful items\textsuperscript{12}.

Risk factors such as smoking, alcohol consumption, physical inactivity, hypertension, high blood cholesterol, obesity and inadequate fruit and vegetable consumption are responsible for large proportions of the overall burden of disease in Australia. The chief risk factor, responsible for 10% of total burden, is tobacco smoking, followed by physical inactivity (7%), high blood pressure (5%), and obesity (4%). Alcohol harm from hazardous drinking (4%) is offset by the benefits from alcohol in terms of cardiovascular disease, giving a net harm of around 2%. 'Fewer than five servings of fruit and vegetables' causes an estimated 3% of burden, as does high cholesterol. Illicit drugs, occupation and unsafe sex each account for less than 2% of the overall burden of disease\textsuperscript{13}.

These results indicate that targeting smoking, hazardous drinking, physical inactivity and obesity in consumers may be most worthwhile. The Health Behaviours form therefore prompts for inquiring about and recording these

\textsuperscript{13} Mathers et al. (2000) ibid
risks and opportunities for intervention, as well as nutrition, weight physical activity and fitness. Items have been selected from the DVA D677 form, and Enhanced Primary Care Assessment Form (Vic).

**Smoking and drinking**

The next questions are about smoking and alcohol use. Consider opportunities for health promotion and the need for a referral if either is an issue.

Evidence / source – DVA D677, and EPC forms.

**Nutrition**

These questions comprise the Australian Nutrition Screen and are selected from the Nutrition Checklist used in the D677 and the EPC Assessment Tools. Because their use as single items is unvalidated, the whole checklist should be used. This then allows total item scores to be used as a trigger for GP referral if the consumer scores in the ‘high risk’ range. Note that some items in the checklist have different scoring weights.

Depending on the consumer’s presenting problems, ask questions such as: ‘Do you have an illness or condition that made you change the kind and/or amount of food you eat?’ or work through the checklist.

Evidence / source – the Nutrition Checklist in the D677 and the EPC Assessment Forms.

**Bush tucker/traditional food**

Use this section to record if the consumer includes bush tucker and/or traditional foods in their diet and, if so, how often. A person’s nutritional status needs to be assessed by taking into account both western and traditional food.

Evidence / source – designed for trial.

**Physical activity and fitness**

A summary report called ‘Getting Australia Active’ contains a full description of the importance and relevance of physical activity and explains many of the concepts involved in reliably measuring both activity and fitness. For screening purposes, keep in mind the domains of physical activity include leisure, gardening and yard work, household chores, active transport and occupational physical activity. 14

“Physical activity is any bodily movement produced by skeletal muscles that results in energy expenditure”15

Important health benefits can be obtained through activity of moderate intensity - such as walking. It is considered appropriate to accumulate this type of energy expenditure through bouts as short as 10 minutes, towards the recommended total of 30 minutes on most days. 16

Physical activity can be gauged by the question: ‘Would you do at least 30 minutes of moderate physical activity (such as walking or yard work or any other type of exercise) on most days of the week? 

**Physical fitness**

Fitness is a different but related concept. The specific wording of this question has not been validated, but it appears to have content validity, given the current understandings of how best to capture this aspect of health behaviour. It should be noted that ‘physical activity’ has been used instead of ‘exercise’. Exercise is a “planned, structured and repetitive bodily movement which is done to maintain one or more components of physical fitness” making it a subset of physical activity.17

‘During the past 4 weeks…what was the hardest physical activity you could do for at least 2 minutes?’

---

17 NSW Health (1996) op cit
If the hardest activity was less than moderate, consider the need for a referral. The following should be used as a guide:

- **Very heavy**: run, fast pace; carry a heavy load upstairs or uphill (25 lbs, 10 kg)
- **Heavy**: jog, slow pace; climb stairs or a hill at moderate pace
- **Moderate**: walk, medium pace; carry a heavy load level ground (25 lbs, 10 kg)
- **Light**: walk, medium pace; carry a light load on level ground (10 lbs, 5 kg)
- **Very light**: walk, slow pace; wash dishes.

Consider both Activities of Daily Living and need for referral if the consumer’s response can be judged as ‘light’ or ‘very light’.

**Evidence / source** – Dartmouth COOP Charts. This question has a convergent correlation with the MOS Scale for Physical Function of 0.59 (Nelson et al. 1998).

**Comment box including other issues**

Use your own judgement to probe for sensitive issues such as substance abuse (legal or illegal) and safe sex habits. The comment box should be used as a place to summarise the information gained or to record any other relevant issues about health behaviours and risks. These should then inform the issues and initial action plan summarised on ONI page 2 of 2 and, if necessary, to develop a care plan.

**Office Use Only**

Record who has completed the form, and the designation or agency. Note that ‘agency’ includes identifiable agencies and centres, GP practices and hospitals. Use the last box to sign and date any change to a new form, at which point the superseded form becomes part of the client’s record.
12 How to complete the Environmental profile

This profile screens for home safety problems and environmental health hazards. It is designed for completion on-site by someone familiar with the house. It is not designed for completion through a formal interview with the consumer. Depending on the circumstances, it can be completed by the consumer, a family member or friend or a health or community care worker. It will rarely be completed in one go.

If an item is irrelevant (eg, there are no steps), simply put a line through the item to indicate that it is irrelevant to this particular consumer.

The home safety data items in the Environmental profile (EP p.1 of 2) are shown in the following table.

<table>
<thead>

If potential hazards are identified, record possible solutions in the comment box. Issues recorded in the Living Arrangements profile (such as who owns the house) will be relevant for this.

Evidence / source – designed for trial by Environmental Health, Population Health & Planning, MNCAHS
13 How to use the tools to investigate need and to develop a consumer care plan

Using the Summary and Action Plan as prompts for referral and further assessments

The second part of the core information (ONI pages 1 and 2) provides prompts and ways to seek further information on specific domains that are relevant to the consumer’s problems or issues that have arisen in the initial contact. The interviewer is expected to take into account the consumer’s presenting problems and issues, the services that the consumer is currently using as well as all other information available to them. This other information might be based on their discussion with the consumer, observing the consumer, information contained in a referral letter, client notes or information provided by a third party, such as a friend, relative, carer or referring agency.

If there is any suggestion that the issue is relevant for the consumer, tick the relevant box and complete the suggested domains in the supplementary tools.

The supplementary tools also contain prompts for further assessment, referral or more action on behalf of the screener.

- The Living Arrangements profile raises issues about informed consent if the consumer’s decision-making capacity is in doubt. This profile also includes indicators of both risks and urgency (living arrangements, housing and so on).
- The Carer profile raises issues about the availability of a carer and the needs of that Carer. It suggests that, if carer issues are significant, they should be linked into carer support services and that completing a set of profiles on the carer might be useful. This profile also includes indicators of both risks and urgency (fragility of carer arrangements and so on).
- The Health Conditions form has prompts for investigating activities of daily living (the Functional Profile), and for medical referral, or medication review.
- The Psychosocial Profile has a scoring system for emotional health and well being that recommends generalist or specialist mental health referral depending on the score, prompts for investigating activities of daily living and assessment for disability services. The profile screens for risks such as suicide and for high prevalence disorders such as anxiety and depression.
- The Functional Profile has prompts for the assessment of domestic, self care, cognition and behaviour domains of functional dependency. It also has a place to list the aids and equipment a consumer is currently using.
- The Health Behaviours form has prompts for referral for screening, and checks on risk factors such as smoking, drinking, nutrition advice, weight and physical inactivity. If fitness may be an issue, then consideration can be given to investigating activities of daily living (using the Functional Profile). Its importance is in identifying opportunities for early intervention and health promotion.
- The Environmental Profile checks for home and environmental hazards that may pose a risk for the consumer and others in their household. Home modifications, repairs and maintenance that will make the home safer are suggested by this profile.

When all the relevant information has been collected, then the action plan and appropriate referrals should be considered. This might not all be done at the point of initial contact, but at a later time when sufficient information is available.
**Using the ONI to record risks and urgency**

Page 2 of the ONI Summary and Action Plan section has a an Alert Box at the bottom that can be used to make a note of any issues of concern, including risks and record any questions of urgency, and the contact details in your agency for further information. This is used to record any concerns identified in relation to the possibility of danger, loss of social participation or reduction in health status. This is where a brief note can be made as to the circumstances involved, and attention can be drawn to more detail being available. If you trigger your own agencies alert procedures, consider indicating this in the box.

Briefly, the description of risks and the urgency of consumer issues can be considered under four main headings.

- Situations in which the consumer is at risk for any reason.
- Situations in which the consumer presents a physical or emotional risk to other people, including family, friends and neighbours. It excludes risks to health professionals.
- Situations in which the consumer represents a possible risk to a health professional, whether intentional or unintentional.
- Situations in which there is an occupational health risk to a health professional for any other reason.

Even if an alert system is not being used for this particular consumer, it is sometimes useful to consider if any low-level risks of the types described above are worth mentioning in this box.

Examples of this might be something like: 'note that consumer reports poor relationship with second daughter' or 'bathroom is on list for home modification - shower hose and bath board are temporary arrangement'.

**Using the Initial Action Plan for referrals**

The Initial Action Plan can describe a referral pathway for consumers who need further assessment or those with complex problems and help keep track of how progress is going and whether any variation needs to made to the plan of care. The columns capture more detail on what information the consumer has consented to share, and has codes for how the referral is being made, what transport is to be used, and what feedback is required.

The 'Feedback required' column is intended to prompt the timely sharing of information between important participants in the consumer’s care. The feedback column is of most relevance when this form is received by another agency and they can determine if the original referring agency, the agency completing the form, or the person’s care-givers or GP require feedback.

By recording the actual date that the referral is made, the agency making the referral can keep track of waiting times and this may help determine whether additional follow-up action is required.
14 Frequently Asked Questions

**Q.** I already waste too much time filling out paper work. When all’s said and done, isn’t this just a bunch of new forms?

If all you do is flick through the paper version of the tool, it’s easy to come to your conclusion. But there’s more too it than a bunch of extra forms to fill out:

- The ONI is designed to replace most of what you collect, not add to it. If all you do is add the ONI to your existing processes and systems, it will undoubtedly add to your workload. But that isn’t the purpose of the ONI. If it adds to your workload, you probably need to go back and review what you do now.

- The design of the ONI assumes that you, and the agency you work for, are part of a bigger primary care service system (the Mid North Coast Coordinated Care Trial) that includes GPs, community health and HACC-funded services. The ONI is necessarily broad (but shallow) because it assumes that you are part of this bigger system. The idea is simple but of fundamental importance. You screen for all the consumers needs (including those you can’t meet but someone else can) and other agencies screen for you.

- The goal is to get to a point where a consumer can access the system at any point they choose and just have to tell their story only once. The advantages for consumers are obvious – not only having to tell their story only once but the ability to access the system at any point and the opportunity to receive care from providers who actually know what the system as a whole is doing.

Whether the ONI is just another bunch of forms or a better (more efficient and effective) system of screening for needs across agencies and professionals depends on how you use it.

**Q.** What do the total numbers on the various screening tools actually mean? Should I add them all up?

Except where it is stated in the profile (eg, the K10 in the Psychosocial Profile), the various screening scores don't mean much as 'scores', because the scales don't have equal weighting for all the items. So adding them up doesn't help and they weren't designed to really work that way. We don't expect the profiles to provide the answer to life, the universe and everything, nor for the answer to be '42'!

In practice, the scores are used as prompts for referral or further assessment where necessary. The key point is setting the thresholds for these prompts right such that you don't get either too many that get assessed or referred unnecessarily or too many that need something that miss out. We looked at the sensitivity and specificity of the screening tools to determine the best mix of these two attributes.

**Q.** What work will be done over the longer term with GPs to encourage their adoption of these tools?

GPs are well placed to adopt the use of the tools. The Enhanced Primary Care (EPC) Medical Benefits Schedule (MBS) items especially concerning health assessments and case conferencing and care planning promote the involvement of GPs in shared assessment and multidisciplinary care planning. Funding and change management initiatives initiated by the Commonwealth through Divisions of General Practice promotes the involvement of GPs in these activities. The profiles have been designed so that they comply with the requirements for EPC claims.
Q. **What level of training and competencies will staff implementing the ONI require and how will this be addressed?**

Staff undertaking initial needs identification should have a broad understanding of the service system and advanced interviewing skills that provide a capacity to maintain and develop rapport throughout intensive inquiry and an ability to retrieve sufficient information through that inquiry.

Training and skills development strategies that build the capacity of workers, organisations and the service system in this area are a key component of the trial.

Q. **Will there be an adapted version of the screening tools that can be used with children?**

The screen is not designed for children in particular and most of the items in the profiles haven’t been validated for use with children. But the core information will be able to be collected on children and we assume that a referral for more detailed assessment will be an appropriate next step if needs are identified.

Our general impression from the testing and the training done to date is that kids can have their problems scored reliably on these tools as long as people take notice of the scoring instructions and use a bit of common sense.

Q. **For some consumers the difficulties of getting through the screening seem too daunting. For example the consumer’s disability or physical circumstances made it difficult to answer many of the questions.**

Consumers with high levels of disability and no communication, consumers who were confined to bed, consumers who were very young and some consumers with brain injury and psychiatric illness, could clearly not perform any of the tasks and, in many cases, were unable to respond on their own behalf. For some consumers, the use of an interpreter for a consumer with a non-English speaking background might be found to be very time consuming and inappropriate. The screener should use their own judgement about the best way to get the relevant information, or refer the consumer to the appropriate assessment agency.

Q. **Another problem is the question of the reliability of the answers from some consumers with cognitive disabilities.**

Some consumers may have poor memory or be suffering from dementia but with a lack of insight into their condition and resistive behaviour towards care. It might be that a consumer has profound deafness that may prevent his or her understanding the questions. The screener should use their own judgement about the best way to get the relevant information, and/or refer the consumer to the appropriate assessment agency.

For consumers with cognitive problems (lack of insight, delusional) all the questions might seem to be inappropriate. Similarly, most items might be inappropriate for a very disabled, bedridden consumer and for a young child with no speech or independent mobility.

For some younger consumers, the questions might highlight the progressive decline in their functional ability, so it could be quite distressing for the consumer to go into all that. Some young, able consumers might also find the questions invasive, offensive, inappropriate or just a joke.

The screener should use their own judgement about the best way to get the relevant information, either by inquiring of a carer or the referring agency, or refer the consumer to the appropriate assessment agency.
Q. What about all the missing bits?

There are a number of general areas that covered by only a general question. Use the comments boxes to note important issues that have to be taken into account.

Questions specifically about the Functional Profile (FP p.1&2)

Q: Mobility items - inside and outside - ie the consumer can mobilise independently in a familiar environment, but has trouble outside. They can do a bit a bit of housework, but not their lawns and gardens, and the back steps need a rail. How does this score?

The profile does not capture most of the important environmental information, however a box at the end asks about aids and equipment currently used. Also, a self-care or domestic assessment may be triggered by the various items on the screen. After the screen, then the assessment of the domains of self care (generally inside) and domestic (a mixture of inside/outside and getting around) should be triggered.

In the above example, a self-care assessment may not actually be suggested by the screen, but a follow-up on domestic function might be. We assume that assessment staff will use both tools in the next level of the assessment process after the screen.

On the FP form the need for a rail outside could be picked up under self-care (in Q9 on stairs). Having an internal stair rail in place means independent inside but its absence outside implies the person needs help (score 1). The consumer's score on the self-care items might then trigger (in routine practice, but not on our form because it is beyond the scope of functional dependency screening as defined in this project) an environmental assessment or OT visit to assess hazards.

Q: Getting around and out and about - transport, shopping and mobility are pretty much all getting at the one thing, so why measure them all?

These items were selected because people tend to loose their ability to do them at different times (and in a consistent order). The ability to shop is generally lost first, followed by transport and then indoor mobility. Knowing where a person sits on this continuum is important. Remember the domestic function items are more for ‘out and about’ and ask for a rating on shopping independently of transportation, which is covered under item 6. Meanwhile, the self-care items are more about getting around in a familiar environment.

The screen is designed to give reliable indicators for both mobility and basic self-care tasks and some pointers to cognition. Remember that Part Two of the screen isn’t used directly with the consumer. It specifically asks an informant about the consumer’s thinking and behaviour.

Q: Finances and Medication - not necessarily a cognitive link. The screen is designed to use money and medications as pointers to cognitive function, but this may confuse the situation where someone is cognitively capable of handling their money and pills, but physically incapable (because of blindness or arthritis for example). What should be done here?

In this case the screen score on items 4 & 5 would be: 1 = with some help; or 0 = completely unable. As noted on the form, this would not trigger a cognitive assessment unless you have determined that the consumer has no physical disabilities or problems with English literacy that may account for the consumer not being independent on these items. It is likely the person might also score 1 or 0 on mobility or shopping items, which would trigger the self-care and/or domestic assessment.
**Q:** **Disability without incapacity - what about someone who is partially blind with practical aids in place, like informal financial arrangements or a Webster pack?**

They should score 2 on items 4 & 5 on the screen = without help, because they have the functional capability, and the screen tool would treat them in the same way as someone with a lesser level of disability who uses glasses and large digit phones and clocks.

**Q:** **What about someone who is legally blind but uses a magnifying glass and is not neglectful? They may be able to use a Webster pack, and that is an obvious preventive intervention to suggest as part of a care plan. How do they score?**

This person would score 2 = without help, on the screening item 4. This is because we want to score the consumer’s present function, not a future likelihood or a “what if” scenario, nor even a direct service need. Although they are closely linked in routine practice, we are not scoring the person’s need for an intervention, only their level of functional dependency (with their current aids and appliances).

It might be that on a re-screening in six months time the score would be 1 = with some help, or it might be that a domestic assessment now would indicate trouble in other areas like getting around or difficulties in the consumer conducting their business unaided when out and about.

**Q:** **My client varies a lot in his functional ability. Some days he can do a task, but the next day he can’t. I have another client who can do domestic tasks but the next day she is in such pain that she can’t get out of bed. How do I rate them?**

In both cases, rate the client at their worst in the last month. If a person cannot do a task without it resulting in significant pain and fatigue such as you describe, rate as a 0 (cannot do).
15 Selected Bibliography for Screening in Primary Care

Introduction

Design of screening instruments

Cromwell D, Eagar K and Poulos R (2002) The performance of an instrumental activities of daily living scale in screening for cognitive impairment in elderly community residents. Accepted for publication Journal of Clinical Epidemiology

HMO workgroup on Care Management. (2000). Risk screening Medicare members revisited: a report from the HMO Workgroup on Care Management. AAHP Foundation, Washington DC.

Owen A, Poulos R and Eagar K (2001) Using the evidence to develop best practice models for identifying initial primary and community care needs. Centre for Health Service Development, University of Wollongong

**Field testing instruments and the analysis of results**

Cromwell, D (2001). Evaluating Dependency Data Items: Making sense of the field testing. Paper prepared for HACC Dependency Data Items Project. Centre for Health Service Development, University of Wollongong (available on request)

**Discussion of implications and a way forward**

Hindle D. Classifying the care needs and services received by HACC clients. A Review of the Options. Aged and Community Care Service Development and Evaluation Reports, April 1998, No.33.

Initial Contact Information

TRIAL ENTRY DATA SET

If information not applicable or not known, record 99

Government Pensioner/Benefit Status

Record: (1) Aged Pension
(2) Veterans’ Affairs Pension (complete details below)
(3) Disability Support Pension
(4) Carer Payment (pension)
(5) Unemployment related benefits
(6) Other gov pension or benefit
(7) No gov’ pension or benefit

Pension/Benefit Card Number

Medicare Number

Health Care Card Number

National Diabetes Supply Scheme Number

DVA Card Status

Record: (1) No DVA Card
(2) Yes – Gold Card
(3) Yes – White Card
(4) Yes - Other DVA Card

DVA Card Number

If DVA, consider use of DVA-funded services.

Insurance Status

Tick all that apply:

(1) None
(2) Private health insurance – basic cover only
(3) Private health insurance – including auxiliary cover for private dental and allied health services
(4) Motor vehicle accident insurance
(5) Workers compensation
(6) Other 3rd party
(7) Ambulance fund

Health Insurer Name and Card Number

If covered, consider use of privately funded services.

Comments on any required communication devices or special interpreter needs

Literacy and numeracy

Problems with reading

Yes No Not sure

Problems with writing

Yes No Not sure

Problems with numeracy

Yes No Not sure

Trial Eligibility Checklist (see trial guidelines)

Record: (1) Person is ATSI or
(2) Person is family member of ATSI
(3) Neither (not eligible for trial)

Record (1) Lives in trial catchment area
(2) Does not live in catchment area (not eligible for trial)

Record (1) Yes, already had a GP
(2) Yes, has now been successfully encouraged/helped to find a GP
(3) No, does not have or want a GP (not eligible for complex care group)

Record (1) Yes, had existing Medicare Number
(2) Yes, has now been successfully helped to get a Medicare Number
(3) No, does not have or want a Medicare Number (not eligible for complex care group)

Trial Sub-Group (see trial guidelines)

Record:

(1) Complex care sub-group
(2) Population health sub-group
(3) Possibly complex, no sub-group yet

If (1) Complex Care Sub-Group, complete all profiles as soon as practical
If (2) Population Health Sub-Group and under 30 years old, complete (at a minimum) the Health Conditions and the Health Behaviours Profiles.
If (2) Population Health Sub-Group and more than 29 years old, complete all profiles
If (3) Possibly complex, complete all profiles within 6 months and then reclassify to either (1) or (2) – see guidelines

Consent (see trial guidelines)

The consumer has given consent to be in the trial

Yes No Not sure

A trial consent form has been signed and provided to the trial

Yes No Not sure

Name: ________________________________ Sign: ________________________________
Living arrangements
Record: (1) Lives alone (2) Lives with family (3) Lives with others

Comments on living arrangements, including family arrangements (consider issues such as stability of arrangements, number of people in household etc)

Accommodation
Record: (1) Private residence – owned/purchasing (2) Private residence – private rental (3) Private residence – public rental (4) Private residence – mobile home (5) Independent living unit within a retirement village (6) Boarding house/private hotel (7) Short term crisis, emergency or transitional accommodation facility (8) Domestic-scale supported living facility (9) Supported accommodation facility (10) Residential aged care facility (11) Psychiatric/mental health community care facility (12) Public place/temporary shelter (13) Private residence rented from Aboriginal Community (14) Temporary shelter within an Aboriginal Community (15) Other (99) Not stated / inadequately described

Comments on accommodation

Consider accommodation status above if home modifications are required (see Environmental Profile).

Employment Status
Record: (1) Employed/self employed (2) Sheltered (3) Child/Student (4) Home duties (5) Unemployed (6) Retired for age (7) Retired for disability (8) CDEP (9) Other

Comments on employment

Financial and legal profile

Mental Health Act status
Record (1) Voluntary (2) Involuntary (3) CTO (4) N/A

Other current legal order (eg, AVO) (circle one)
Yes No Not sure

If yes, specify:

Decision-making responsibility
Record: (1) Self (2) Enduring Power of Attorney (3) Guardian

Is the person capable of making their own decisions? (circle one)
Yes No Not sure

If 'not sure' or 'no', consider the need for assistance, need for cognitive assessment and the implications for consent.

Financial decisions
Record: (1) Self (2) Power of Attorney (3) Administrator (4) Parent or Guardian

Cost of living decisions
Because of limited income, has the consumer during the last month made any trade-offs among purchasing any of the following: prescribed medications, necessary medical care, adequate food, necessary home care, necessary transport?
Yes No Not sure

If yes, discuss issues with consumer and consider need for counselling (eg, financial, gambling, drug or alcohol) and need for material support.

Score:

1 None of the time 4 Most of the time
2 A little of the time 5 All of the time
3 Some of the time

Total K-10 Score: ______________

Recommended action: refer for primary care mental health assessment if total score is 16-29 and for a specialist mental health assessment if score is 30 or more.

Have you had any difficulty sleeping? Y ☐ N ☐

Details:

Family and personal relationships
Does this person generally make and/or keep up friendships?
(1) Friendships made or kept up well (2) Friendships made or kept up with slight difficulty (3) Friendships made or kept up with considerable difficulty (4) No friendships made or none kept up

Does this person generally have problems (e.g. friction, avoidance) living with others in the household?
(1) No obvious problem (2) Slight problems (3) Moderate problems (4) Extreme problems

Comments

Stolen Generation
Consumer or family are from the stolen generation

Yes No D/K

Stolen generation issues impact on the consumer’s current life and relationships

Yes No D/K

Comments

Relationships with service providers
Does the consumer mistrust health and community service providers because of previous bad experiences?

Yes No Not sure

Comments

Disability
Is the person likely to be eligible for disability services (circle yes only if they clearly meet all of the criteria below)?

Yes No D/K

Eligibility criteria (tick)
Has a disability attributed to an intellectual disability or a sensory, physical or neurological impairment or brain injury
The disability is permanent or likely to be permanent
Substantially reduced capacity in self-care/management or mobility or communication or learning
Need for continuing support

Comments

Personal and social support
During the past 4 weeks…Was someone available to help you if you needed and wanted help? For example if you…
- felt very nervous, lonely or blue
- got sick and had to stay in bed
- needed someone to talk to
- needed help with daily chores

Yes, as much as I wanted
Yes, quite a bit
Yes, some
Yes, a little
No, not at all

Consider referral & activities of daily living

Comments on personal and social support, including opportunities
Activities of Daily Living (functional screen)

Questions to ask the consumer (or the person who represents the consumer)\(^1\).

I would like to ask you about some of the activities of daily living, things that we all need to do as part of our daily lives. I would like to know if you can do these activities without any help at all, or if you need some help to do them, or if you can’t do them at all. The questions refer to how you are managing at the moment.

</tbody>
</table>

NOTES:
- If unanswered, score X.
- Rate what the person is currently capable of doing rather than what they actually do. In assessing capability, take into account not only physical function but also cognition (such as problems caused by dementia or an intellectual disability) and behaviour (such as unpredictable challenging behaviour). Consumers able to complete a task with verbal prompting should not be rated as independent (and therefore should be rated as a 1). In rating an item that is irrelevant (for example, the person has no shops in the vicinity or does not use any medications), rate based on what the person would be capable of doing if the item was actually relevant to their situation.
- Item 6 (walking). Clients who are in a wheelchair should be rated as (1) if they are independent including corners etc or (0) if they are not wheelchair independent.

Questions for you to complete

Complete the following based on all information available to you – your judgement based on interviewing or observing the client, information contained in a referral letter, consumer notes or information provided by a proxy respondent, such as a friend, relative, carer or referring agency.

Note that the consumer should not be directly asked to answer these questions.

<table>

</tr>
</tbody>
</table>

Recommended functional assessments based on this functional screen

**Domestic**
Look solely at items 1 to 5. Count the number of these items that scored 2 (ie, count the number of activities that the person can do without help). Refer for a domestic functional assessment if the person can do less than 3 activities without assistance – ie, the count is 2 or less (a count of 0, 1 or 2).

**Self-care**
Refer for a self-care functional assessment if the consumer SCORED LESS THAN 2 on either Item 6 (mobility) or Item 7 (bathing).

**Cognition**
Refer for a cognitive assessment if:
- the consumer scored LESS THAN 2 on either Item 4 (medicine) or Item 5 (financial management) AND you have determined that the consumer has no physical disabilities or problems with English literacy that may account for the consumer not being independent on these items OR
- the consumer scored 0 on Item 8.

**Behaviour**
Refer for a behavioural assessment if:
1. the consumer scored LESS THAN 2 on either Item 4 (medicine) or Item 5 (financial management) AND you have determined that the consumer has no physical disabilities or problems with English literacy that may account for the consumer not being independent on these items OR
2. the consumer scored 0 on Item 9.

</table>

**Bush Tucker / Traditional Food**

Record (1) daily (2) weekly (3) occasionally (4) rarely

**Physical Activity**

Would you do at least 30 minutes of moderate physical activity (such as walking or yard work or any other type of exercise) on most days of the week?

- Yes □ No □

Consider referral if ‘no’.

**Physical Fitness**

During the past 4 weeks...what was the hardest physical activity you could do for at least 2 minutes?

- Very heavy (for example) run, fast pace; carry a heavy load upstairs or uphill (25 lbs, 10 kg)
- Heavy (eg) jog, slow pace; climb stairs or a hill at moderate pace
- Moderate (eg) walk, medium pace; carry a heavy load level ground (25 lbs, 10 kg)
- Light (eg) walk, medium pace; carry a light load on level ground (10 lbs, 5 kg)
- Very light (eg) walk, slow pace; wash dishes

Consider both Activities of Daily Living and need for referral if response is ‘light’ or ‘very light’.

**Comments**, including other relevant issues (eg, other substance use, safe sex practices, mens health issues) and opportunities for health promotion

MNC CCT FINAL DRAFT 4 OCTOBER

---
The modified NSW Home Safety Checklist

**Floors**

1. Do carpets and mats lie flat without wrinkles or curled edges? Y N
2. Do loose mats have a slip-resistant backing? Y N
3. Are spills cleaned up as soon as they occur? Y N
4. Are floors free of clutter? Y N
5. Are all cords safely away from walkways? Y N
6. Are floor surfaces non slip? Y N

**Lighting**

1. Are lights bright enough to see clearly? Y N
2. Are stairs and steps well lit? Y N
3. Are light switches easy to reach and near each doorway? Y N
4. Can the light be easily switched on from the bed? Y N
5. Is there good lighting where medicines are kept? Y N

**Stairs, Steps and Ladders**

1. Is it easy to see the edges of the steps clearly? Y N
2. Are stairs and steps well lit? Y N
3. Is there a light switch at top and bottom of steps? Y N
4. Are non-slip treads or paint used on the edges of each step? Y N
5. Are coverings on steps in good condition? Y N
6. Do the steps have a sturdy handrail? Y N
7. Is the step ladder or stepstool short & sturdy with anti-slip feet? Y N

**Bathroom and Toilet**

1. Are there slip-resistant mats in the bathroom? Y N
2. Is the soap, shampoo and towel within easy reach so that the user does not have to bend or reach too far? Y N
3. Is it possible to get out of the bath or shower without holding onto taps or towel rails? Y N
4. Are there handrails in the bath and shower? Y N
5. Is it possible to walk directly into the shower without stepping over a raised edge? Y N

**Kitchen**

1. Can regularly used reach kitchen items be easily reached without climbing, bending or upsetting your balance? Y N
2. Is there good lighting over work areas? Y N
3. Are spills mopped up immediately? Y N
4. Is there good ventilation to reduce the risk of eyeglasses fogging? Y N

**Louge Room**

1. Is it easy to get out of lounge chairs? Y N
2. Are all cords, furniture and clutter kept away from walkways? Y N
3. Is furniture placed so that it isn't necessary to stretch or lean too far to open windows? Y N

**Bedroom**

1. Can a light be turned on before getting out of bed? Y N
2. Is there a telephone in the bedroom? Y N
3. Is the electric blanket cord safely secured so that it can't be tripped over? Is the control easy to reach from the bed? Y N
4. Is the bedspread made without a looped fringe? Y N

**Clothing and Footwear**

1. Does the consumer wear shoes with non-slip soles? Y N
2. Does the consumer wear shoes with rounded broad heels? Y N
3. Does the consumer wear street shoes rather than slippers outside the house? Y N
4. Does clothing fit securely with no dangling cords or hems? Y N

**Outside the House**

1. Are the edges of steps clearly marked? Y N
2. Do step edges have an adhesive non-slip strip? Y N
3. Do the steps have a sturdy, easy-to-grip handrail? Y N
4. Are the paths around the house in good repair? Y N
5. Are the paths and entrances well lit at night? Y N
6. Is the garden kept free of hazards (i.e. tools, hoses)? Y N
7. Are garage floors free from grease and oil? Y N
8. Are the public areas around the house in good repair? Y N

**Total score (out of 20)**

<table>
<thead>
<tr>
<th>General rating instructions</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Take into account all sources of information (discussion with the consumer and carers, staff etc as well as what you observe).</td>
</tr>
<tr>
<td>2. If you have insufficient information to make a rating, rate 4 ‘not applicable’.</td>
</tr>
<tr>
<td>3. <strong>Not applicable</strong> means that you learn of no circumstances in which the consumer has engaged in the behaviour in the past. Current and future service providers will need to observe the consumer, be aware when similar circumstances occur and take appropriate intervention to prevent the recurrence of the behaviour.</td>
</tr>
<tr>
<td>5. <strong>Supervision</strong> means that current or future service providers will need to ensure that specific situations or triggers which are likely to give rise to the behaviour do not occur, or are managed in ways to minimise the likelihood of occurrence.</td>
</tr>
<tr>
<td>6. <strong>Daily means during a twenty four hour period.</strong></td>
</tr>
<tr>
<td>7. <strong>Question 1</strong> includes night wandering and also to the consumer wandering from home or, while wandering, interfering with other people or their belongings.</td>
</tr>
<tr>
<td>8. <strong>Question 2</strong> includes abusive language and verbalised threats directed at family, carers, neighbours or a member of staff. It also includes a consumer whose behaviour causes sufficient noise to disturb other people. That noise may be either (or a combination of) vocal, or non-vocal noises such as rattling furniture or other objects.</td>
</tr>
<tr>
<td>9. <strong>Monitoring</strong> means that you learn of circumstances in which the consumer has engaged in the behaviour in the past. Current and future service providers will need to observe the consumer, be aware when similar circumstances occur and take appropriate intervention to prevent the recurrence of the behaviour.</td>
</tr>
<tr>
<td>10. <strong>Question 4</strong> is limited to the following behaviours: (a) active and passive resistance other than physical aggression (b) attention seeking (c) manipulative behaviour and/or (4) withdrawal.</td>
</tr>
<tr>
<td>11. <strong>Question 5</strong> refers only to high-risk behaviour. It includes behaviour requiring supervision or intervention and strategies to minimise the danger. Examples of such behaviour include unsafe smoking habits, walking without required aids, leaning out of windows, self-mutilation and suicidal tendencies. This question is about behaviour and does not apply where a consumer has a medical condition that might lead to injury, for example, through fits or loss of consciousness. It does not apply to a range of behaviours which might in the longer term be considered as damaging or health reducing such as smoking generally or non-compliance with a specialised diet. It applies where there is an imminent risk of harm.</td>
